

CUSTOMER

A Fortune 500 foreign bank in China

ENGAGEMENT SUMMARY

Setting up of Disaster Recovery site for the bank's routine operations and CNAPS complying with bank's corporate and PBOC regulations. Zero site readiness lead time with integrated one touch app for activating all stakeholders.

PROBLEM

- As today's organizations operate within environments of increasingly diluted control, unforeseen events can often incur heavy burdens on business continuity.
- Natural disasters or unforeseen events all have one common theme to businesses – an ability to interrupt or jeopardize IT flow of service – and thus affect the bottom line.

SOLUTION

- Hot site: A hot site is a commercial disaster recovery service that allows a business to continue in the event of a computer or equipment disaster.
- Cold site: A cold site is a similar type of disaster recovery service that offers infrastructure where customer can provide and installs all of their own equipment for greater savings.
- Dedicated site: An alternate site with a fully customized infrastructure.

METHODOLOGY

- One Touch: Seamless DR setup & operation model

BENEFITS

- Effective – Make sure customer gets the recovery it needs.
- Efficient – Balance recovery & Operational requirements with cost
- Reliable – Build in the regular, realistic testing
- Collaborative - Build ecosystem to deliver end-to-end DR solution
